

## **New iXBlue inertial solutions for digital battlefield**

iXBlue is a French private company offering unchallenged inertial solutions for various land defense applications :

- artillery and mortars digitalization, topography and gun laying systems,
- high mobility radar and weapon systems,
- optronic observation platforms and collaborative armored vehicles.

iXBlue inertial technology, based on high grade Fiber Optic Gyroscope technology, is the best answer to the stringent requirements of new equipment and modernization programs : more performance for limited costs.

Mr Bruno Protte, former artillery officer with large experience in defense industry, joined iXBlue two years ago to develop the land defense [products and solutions](#).
